

Project Dasein

ML Pipeline Details:

Step Detection Pipeline Flowchart

There are 2 types for pipelines as per current implementation

1. Data upload pipeline
2. Model Training Pipeline

1. Data Upload Pipeline:

In this pipeline we are using S3, ECR and EC2 resources from AWS. Along with AWS we are using Git for code repository and Github actions for triggering pipeline.

List of resource name:

1. S3: ds-step-detector
2. ECR: ml
3. EC2: ml-data-upload

2. Model Training Pipeline:

In this pipeline we are taking all of our curated data and performing model training/Tuning.

Git for code repository and Github actions for triggering pipeline. Here we are using only S3 bucket as AWS resource

Github account used for ML Pipeline:

URL: <https://github.com/>

Username: projectdasein.backend@gmail.com

Password: Gamesgamesgames123!

Github Repositories:

=====

1. step detector train data:

Repo link: <https://github.com/projectdasein/step-detector-train-data>

2. step detector upload data

Repo link: <https://github.com/projectdasein/step-detector-upload-data>

EC2 details used for ML Pipeline:

=====

Portal IP: <http://52.32.84.38/8080>

SSH Command: `ssh -i "MLUser.pem" ubuntu@ec2-52-32-84-38.us-west-2.compute.amazonaws.com`

Pem file attached .

IAM ML User credential

=====

ID: MLuser

PWD: ProjectDaseinML5555

Account ID:112002133887

Pemfile:MLUser.pem(attached in zip)

AWS_ACCESS_KEY_ID="AKIARUE6Y557R2XZP3ZS"

AWS_SECRET_ACCESS_KEY="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"

AWS_REGION="us-west-2"

AWS_BUCKET_NAME="ds-step-detector"

AWS_ECR_LOGIN_URI="112002133887.dkr.ecr.us-west-2.amazonaws.com"

ECR_REPOSITORY_NAME="ml"

DB Viewer Details
